

# Less Lights More Stars

When night falls, Xinjiekou, the busiest urban community in Nanjing, is harassed by "white night". Beautiful night lighting makes our nightlife colorful, but do you know that excessive use of artificial light leads to light pollution?

## What is light pollution?

It is caused by excessive or poor use of artificial lights and is very common in our daily life. Its phenomena include light trespass, over-illumination, light clutter and so on.

## What are the serious hazards of light pollution?

Nowadays, when you look up at the sky at night in Xinjiekou, you will find that stargazing has become a luxury. But light pollution not only makes the stars disappear, but also increases energy consumption, causes traffic accidents, disrupts our circadian rhythm and damage the ecosystem ...

## What can we do?

After research, these measures are found to be the most suitable for Xinjiekou to mitigate light pollution hazards:

- Optimize the planning of urban layout and reasonably arrange the light distribution
- Control the starting and closing time of artificial lights
- Introduce a set of reward and punishment mechanisms
- Reduce the rated power of lights on buildings
- Raising public awareness of light pollution prevention through education

***Everyone can contribute to make our community a better place to live.  
Let's do our part to return a bright starry sky to Xinjiekou from now on!***
